

Video Production Brief

Complete producer handoff package — brand system, assets, music direction, motion specs, delivery requirements, and per-video brief · July 2026

This document accompanies the Video Scripts document. Read both before beginning production. The scripts contain scene-by-scene copy and timing. This document contains everything needed to execute them — brand assets, style references, motion guidance, and delivery specs.

1. BRAND SYSTEM

All six videos use the same brand system. No exceptions. No off-brand colors, fonts, or design patterns.

Color Palette

SWATCH	NAME	HEX	USE
	NAVY	0A0F2E	Primary background — all videos
	GOLD	C9A84C	Accents, labels, highlights, CTAs
	TEAL	2B8A6E	Readiness OS positive states, 'with' column
	OFF-WHITE	F4F1EC	Body text on dark backgrounds
	RED / ALERT	B83228	Problem states, 'without' column, costs

NEVER USE: purple, violet, cyan, indigo, blue-600+, orange, or yellow. If a state needs warning treatment, use gold. If it needs alert/danger, use the red above.

Typography

TYPEFACE	USAGE
Cormorant Garamond	Editorial headlines, hero text, taglines, emotional moments. Available free on Google Fonts.
Barlow Condensed	Labels, eyebrows, caps/allcaps elements, timestamps, data callouts. Available free on Google Fonts.
Barlow	Body text, supporting copy, bullet points, voiceover text cards. Available free on Google Fonts.

Monospace font (for counters/costs only): Use system monospace or Roboto Mono. Only for ticking cost counters and data readouts — never for editorial copy.

Brand Mark

The VM seal (circular mark with 'VM' initials) appears at the end of every video and optionally as a watermark in upper-right during the close. Files provided in the assets package:

- vaughnmartin-seal.svg — circular seal, 400×400, use as square watermark
- vaughnmartin-logo-full.svg — full lockup: seal + VAUGHNMARTIN wordmark + READINESS OS subtitle, 560×160

The seal uses a gold gradient ring. Do not recolor. Do not add drop shadow. Do not place on any background other than navy or pure black.

2. ASSETS PROVIDED BY VAUGHNMARTIN

The following files will be provided before production begins. Do not start video production without confirming all assets are received.

ASSET	FILE / FORMAT
VM Seal	vaughnmartin-seal.svg (vector)
Full Logo Lockup	vaughnmartin-logo-full.svg (vector)
Founder Headshot	mb-headshot.jpg — circular crop, gold ring border — for Video 2 (Investor) and Video 3 (Founder)
Stanford Photo	mb-stanford.png — coaching staff photo — for Video 3 (Founder) only
Font Files	Cormorant Garamond, Barlow, Barlow Condensed — all available at fonts.google.com
Platform Screenshot	Command Tower screenshot for Video 3 (Founder) brief product moment — Martin to supply
Color Swatches	HEX values above — producer to create project swatches

If any asset is missing before production begins, email founding@vaughnmartin.com. Do not substitute stock images or placeholder logos.

3. MUSIC DIRECTION

Music is one of the highest-impact production decisions. These are not optional guidelines — they are brand direction. The wrong music undermines the positioning.

Overall tone

Readiness OS is not a startup hype product. It is infrastructure. The music should feel like something a CFO or COO would not turn off. Think: weight, precision, restraint. Not cinematic drama. Not corporate optimism. Controlled tension that resolves into clarity.

Per-video music direction

VIDEO	MUSIC DIRECTION
Video 1 — Customer	Opens in complete silence (0:00–0:32 — no music). At the 12-minute reveal (0:32), minimal piano or sparse electronic enters. Resolves clean on the tagline. Reference: Hans Zimmer 'Cornfield Chase' feel — restrained, not swelling.

Video 2 — Investor	Data-driven, building. Starts sparse at the \$13B number. Builds through the market validation section. Peaks at the first-mover positioning. Reference: Max Richter 'On the Nature of Daylight' tone — intelligent, credible.
Video 3 — Founder	Begins in silence for the father story. Minimal, personal instrumentation enters at the Stanford/Fortune 500 contrast. Never swells — stays intimate. Reference: Nils Frahm solo piano tone. Must feel earned, not produced.
Video 4 — Situation	No music under the WITHOUT section. Teal moment (WITH Readiness OS) triggers sparse tonal entry. The closing two-line statement returns to silence. Music should underline contrast, not fill space.
Video 5 — Founding Partner	Understated. The silence of the cold open numbers is the hook. Minimal electronic enters at the 'What You Get' section. Should feel like a quiet, confident decision — not urgency.
Video 6 — LinkedIn Short	No music required. Designed for silent autoplay. If music is added, it must read as texture only — never lyrical, never recognizable.

Music licensing: all tracks must be cleared for commercial use. Recommend Artlist.io or Musicbed.com for licensing. Do not use YouTube Audio Library — quality is inconsistent. Budget should account for licensing fees.

4. MOTION AND ANIMATION STYLE

Every text reveal, transition, and animation should feel deliberate. The aesthetic is minimal and precise — not flashy, not templated.

Text reveals

TREATMENT	USAGE
Hard cut	Timestamps, single-word impacts (3:17 AM, Ransomware, \$2.5B). No transition. Instant.
Fade in (0.3s)	Supporting copy, body text, bullet points. Subtle. Never longer than 0.4 seconds.
Type-on (monospace only)	Cost counters and data readouts only. Simulates live calculation. Not for editorial text.
Slide in — AVOID	Do not use slide-in or fly-in animations. They feel template-made and undermine the premium positioning.
Bounce / scale — AVOID	Do not use bounce, scale pop, or spring animations anywhere in any video.

Transitions between scenes

- Default: hard cut. Use it everywhere unless a specific transition is noted in the script.
- Gold horizontal wipe: use once, at the pivot moment in Video 1 when the problem becomes the solution (scene 5 — the 12-minute reveal).
- No dissolves, no cross-fades, no star wipes, no motion blur transitions.

Lower thirds and labels

- All labels: Barlow Condensed, uppercase, 8–10pt equivalent, gold (#C9A84C), left-aligned.
- No animated lower-third banners. Labels appear on cut — they do not slide in from off-screen.
- Timestamp treatment: large Cormorant Garamond, red (#B83228), appears on hard cut.

Cost counters (Video 1 and Video 6)

The cost counter is the most important motion element in the entire suite. It must feel real — not like a motion graphic. Monospace font, white on black, counting up at a rate that creates genuine unease. Test the rate: too fast feels fake, too slow loses urgency. Target: \$0 to \$500,000 in approximately 8 seconds.

5. VIDEO 3 — FOUNDER VIDEO — PRODUCTION NOTES

This is the only video requiring a physical shoot. It is also the highest-priority video in the suite. Do not compromise on this one.

Setup

ELEMENT	SPEC
Camera	iPhone 14 Pro or better (4K/24fps ProRes) OR mirrorless camera (Sony A7, Fuji X series). DSLR acceptable. Do not use webcam.
Lens / framing	Medium close-up. Head and shoulders. Subject fills approximately 60% of frame height. Some breathing room above head.
Background	Navy wall, dark charcoal wall, or simple dark-toned background. No busy bookshelves. No ring light halo visible in background. No Zoom-style virtual background.
Lighting	Single large window light, camera-right. Fill with white foam board or reflector camera-left. No ring light — the catch-light shape gives it away. Golden hour or overcast daylight preferred.
Audio	Lavalier mic (Rode Wireless GO or equivalent) OR AirPods Pro in ear (acceptable for first draft). Record room tone for 10 seconds before starting. No USB desktop mic picked up off-camera.
Clothing	Solid dark color — navy, charcoal, deep burgundy. No patterns. No logos. No white shirt (blows out against dark background).
Teleprompter	Do not use. Key points only are in the script. Martin should know the content, not read it. Eye contact with lens is mandatory — not slightly off-axis as if reading.

Shot list for Video 3

SHOT	CONTENT
Primary: Medium close-up	Main talking head — entire video recorded here. 2+ takes per section minimum.
Insert: Platform screen	3–4 seconds of the Readiness OS platform (Mission Control or Protocol Library). Captured via screen recording at 4K. Used in Scene 4 only.

Close-up: Hands (optional)	If Martin uses hand gestures naturally, capture a B-roll of hands only — adds visual variety for editing.
-----------------------------------	---

Do not over-direct Martin on delivery. He has a natural founder voice that disappears when over-coached. Give him the key points, let him speak, capture multiple takes. The best take will be the one where he forgets the camera is there.

6. DELIVERY SPECIFICATIONS

SPEC	REQUIREMENT
Master resolution	4K (3840×2160) minimum for Videos 1, 2, 3, 4, 5. 1080p acceptable for Video 6 (LinkedIn Short only).
Frame rate	24fps. Not 30fps, not 60fps. 24fps reads as intentional and cinematic.
Aspect ratios	16:9 (1920×1080 export) for all videos. Additionally export Video 6 as 1:1 (1080×1080) for LinkedIn square format.
Color space	Rec.709 for web delivery. No HDR.
File format on delivery	H.264 .mp4 for all web/social versions. ProRes 422 .mov for master archive files.
Audio	Stereo, -14 LUFS (integrated loudness), -1 dBTP peak. This matches LinkedIn, YouTube, and web standards.
Captions	Closed captions (.srt file) required for Video 3 (Founder) and Video 4 (Situation) minimum. Recommended for all six.
Deliverable naming	VM_CustomerVideo_v1.mp4 / VM_InvestorVideo_v1.mp4 / VM_FounderVideo_v1.mp4 / VM_SituationVideo_Pricing_v1.mp4 / VM_FoundingPartnerVideo_v1.mp4 / VM_LinkedInShort_v1.mp4

Revision rounds

Two revision rounds included per video. Round 1: structural feedback (pacing, scene order, copy accuracy). Round 2: polish feedback (color, music levels, text timing). Submit each video for review before moving to the next — do not batch all six and deliver simultaneously.

7. PRODUCTION PRIORITY ORDER

Produce in this sequence. Each video is needed for a different purpose and the earlier ones unblock the most immediate revenue and investor conversations.

PRIORITY	VIDEO
1	Video 3 — Founder
2	Video 1 — Customer
3	Video 6 — LinkedIn Short
4	Video 4 — Situation

5	Video 5 — Founding Partner
6	Video 2 — Investor

Videos 3 and 6 should both be complete within 2 weeks of production start. These two do the most immediate work and require the least production complexity.
