

The strategic response is ready *before the trigger fires.*

Coordination infrastructure for the Fortune 1000.

Fortune 1000 organizations lose billions

because the response is built after the trigger fires.

30 days

to mobilize a response inside the average Fortune 1000 enterprise when a strategic trigger fires.

By the time they move, the competitor has acted, the regulator has moved, or the window has closed.

Every Fortune 1000 organization faces multiple triggers per year:

- Cyber incidents
- M&A integrations
- Activist campaigns
- Leadership transitions
- Regulatory actions
- Competitive disruptions
- Market opportunity windows
- Supply chain disruptions

Cost per trigger: \$50M to \$500M.

Championship football programs close the same gap *every Saturday in 40 seconds.*

FORTUNE 1000

Trigger fires.

The organization spends 30 days figuring out who should be in the room.

Building a response from zero. Every time. For every trigger. Across every domain.

Result: the window closes before the response begins.

CHAMPIONSHIP FOOTBALL

Trigger fires.

The response is already built. Every situation owned. Every role rehearsed at full speed by Thursday.

40 seconds from signal to coordinated execution across 11 roles.

Result: the preparation decided Saturday on Tuesday.

The only difference is architecture.

Readiness OS builds the response *before the trigger fires.*

IDENTIFY

248 data points monitored every 15 minutes across 9 strategic domains

DETECT

221 triggers pre-wired. Pattern recognition surfaces classified signals before peak pressure

EXECUTE

170 pre-staged playbooks deploy in 12 minutes. Team, tasks, communications, decision rights

ADVANCE

Close-out gate encodes learning. By activation 12 the playbook is no longer founder-authored — it is organization-authored. That is 100%+ net retention.

The ADVANCE phase is where the platform becomes irreplaceable. Every activation encodes decision logic specific to this organization's failure modes — by activation 12, a competitor who buys the software starts at zero.

30 days compressed to 12 minutes.

3,600× Execution Head Start.

Four researchers. Four disciplines.

One conclusion.

Dr. Kerry Huang

Fortune 50 AVP • ESI Top 1% Researcher • Forbes Council • 408-firm governance study

"Governance as pre-commitment, not governance as review. The boundary between what architecture can supply and what only human capacity can carry is where the next decade of governance work sits."

Scott DeJarnette, PhD

Cybersecurity Strategist • CIO Advisor • Triple CCIE • Incident Response • M&A Integration

"Coordination speed is a precommitment problem, not a communication problem. The organization did not execute a plan. It assembled one under stress."

Jim Highsmith

Co-author • Agile Manifesto • 40+ years of management thinking

"Process ran the last era. Judgment runs the next. The cycle reinforces itself until the organization needs judgment that is no longer there."

Dr. Kulneet Suri

Harvard Alumna • Oxford Research Reviewer • Applied Behavioral Scientist

"Control produces compliance. Capability produces ownership. Performative governance is more dangerous than no governance at all."

That does not happen with a weak thesis.

AI did not create our product.

AI created the market for our product.

Decision density

AI has simultaneously increased decision density and arrival speed for every Fortune 1000 organization. The bottleneck is no longer speed. It is calibration.

The Microsoft gap

Every Fortune 1000 has the Microsoft AI stack live. Copilot, Azure, Teams. None have the operating model to use it at the speed it now operates. Readiness OS is that operating layer.

Category window

No category leader exists for strategic coordination infrastructure. The window for category ownership is 18 months. We are already in it.

Jim Highsmith (Agile Manifesto): "Process ran the last era. Judgment runs the next."

A competitor can rebuild the software in 12 months.

They cannot rebuild any of these.

1

20 years of Fortune 1000 decision logic

170 playbooks encoding operational decision architecture from Ford, Toyota, Lockheed Martin, Schwab, Vantiv/Worldpay, Boyd Gaming, and Churchill Downs. A competitor cannot buy the twenty years.

2

Compounding organizational intelligence

Every activation makes the platform more specific to that organization's failure modes, decision preferences, and stakeholder dynamics. This is the mechanism behind net retention above 100%: the platform becomes more valuable with each use, not less. Organizations do not replace infrastructure that knows them.

3

Embeddedness in the preparation rhythm

When Readiness OS becomes the organizational rhythm of Fortune 1000 strategic preparation, it is not a vendor relationship. It is infrastructure. Infrastructure does not get replaced.

One platform. Two deployment paths.

No per-seat pricing.

ENTERPRISE PILOT • FORTUNE 1000

\$75,000 flat fee

90-day deployment

DELIVERS

Full platform across selected domains. Signal pipeline live. Playbook library activated. Executive team trained.

CONVERTS TO

Annual license at \$150K–\$250K/yr based on scope.

3 Founding Partner pilots in active conversation.

GROWTH DEPLOYMENT • PE-BACKED & MID-MARKET

READY

\$75K/yr

3 domains • 60 playbooks

RESPONSIVE

\$150K/yr

6 domains • 120 playbooks

ORCHESTRATED

\$250K/yr

Full platform • 170 playbooks

Priced on deployment scope. The platform covers the organization or it doesn't.

Shipped. Validated. Ready to scale.

PRODUCT

- Live in production at vaughnmartin.com
- 151 page components · 170 playbooks · 221 triggers
- Live signal pipeline · 248 data points · 15-min cycles
- 7 ecosystem integrations · 5 AI surfaces
- \$75K pilot priced below procurement threshold · 90-day ROI

VALIDATION

- 4 independent researchers publicly validated thesis
- Kerry Huang reposted to Fortune 50 network
- 5 Fortune 500 advisors reviewing platform
- 3 Founding Partner pilots in active conversation

WHAT SPEEDRUN UNLOCKS

12 weeks

in San Francisco to close 3 Founding Partners, hire commercial cofounder, and reach \$1M ARR.

WHY SR007

- Fortune 1000 executive network access
- Battle-tested operators covering gaps
- Demo Day to 1,000+ early-stage investors
- Forcing function for full-time transition

The strategic response is ready before the trigger fires.

THE FOUNDER

Martin Brunke

Founder, VaughnMartin.

FORTUNE 1000

20 years inside operations at:

- Ford Motor Company
- Toyota
- Lockheed Martin
- Charles Schwab
- Vantiv / Worldpay
- Boyd Gaming
- Churchill Downs Incorporated

MAJOR COLLEGE FOOTBALL

5 years coaching at Stanford.

The practice field where preparation architecture compressed 30-day organizational decisions into 40 seconds.

THE PATTERN

Same coordination failure across 7 industries. Same solution already proven on the practice field. The infrastructure nobody built for the boardroom.

VaughnMartin is named for my father, Vaughn. The product carries his standard.

WE MAKE ENTERPRISES FEARLESS.

Preparation. Readiness. *Fearless.*

The strategic response is ready before the trigger fires.
